

## Peplink Products Featuring Dual Firmware

Benefits and Uses of Dual Firmware

### Background

Peplink Balance is designed to be a reliable piece of network equipment that you can rely on for continuous service 24/7. Dual Firmware, like many other features you can find in a Peplink Balance, helps you increase network service uptime. Uncommon as it sounds, each Peplink Balance unit has two memory partitions with two independent firmwares installed and integrated into the system. With a backup firmware stored in second partition, expected downtime will be sharply reduced. Flexibility is another advantage as two different copies of firmware can be stored on a Peplink device and a user may select any one of them to boot from.

### Benefits and Uses

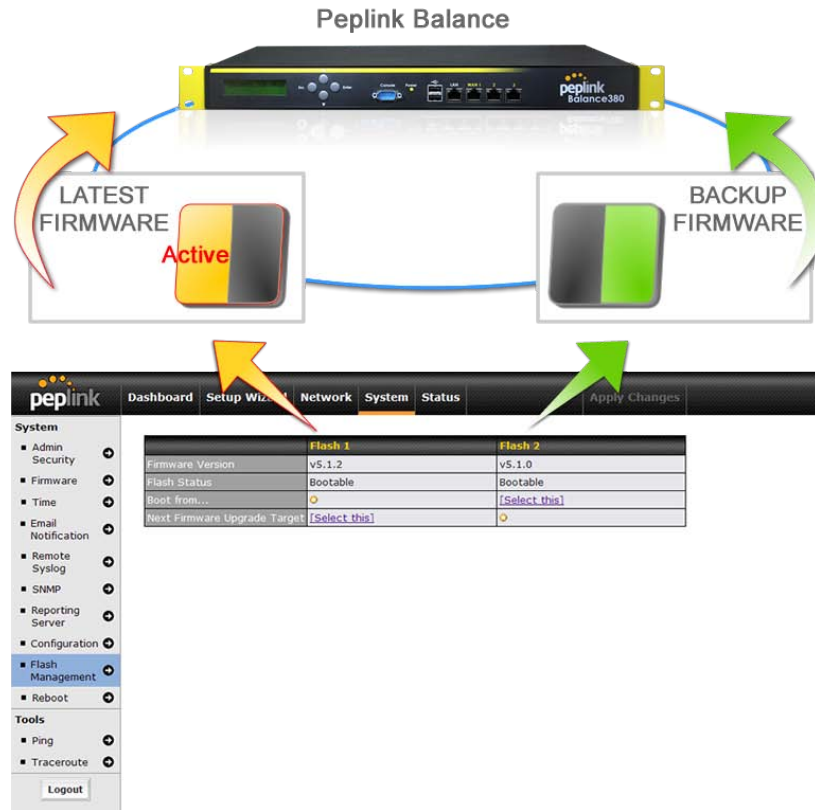

#### Reduced Downtime and Upgrade Risk

Dual Firmware protects customers from risks associated with upgrades, e.g. power outage. A Peplink device will check for firmware integrity when booting up. It will automatically select the alternate copy when it detects a corrupted firmware.

### Fast Fallback and More Flexibility

For customers who want to try the latest and greatest firmware, the presence of a second partition of firmware means fast fallback is possible as a user can always specify which firmware to boot from.

### About Peplink

Peplink is the proven market leader in delivering Internet link load balancing solutions. Peplink's products have been deployed by service providers, public safety agencies, city governments and enterprise customers around the world. As an innovative creator of technology solutions, Peplink operates globally with offices in North America and Asia in cooperation with distributors, system integrators and strategic alliance partners.
